Dear [REDACTED]

It is my pleasure to inform you that the Department of Health and Physical Education and the Dean's office have approved your application for admission into the Teacher Education Program in both Health Education and Physical Education within the Feinstein School of Education and Human Development. Based on your skills, past performance, and personal qualities, you are entitled to enter the department's professional education sequence.

You must take and pass the Principles of Learning and Teaching test for either grades k-6 (0522) or grades 7-12 (0524) before student teaching. Because the content of CEP 315 and the content of the Principles of Learning and Teaching test (PLT) are similar, you are encouraged to take the PLT immediately after completing CEP 315. The passing score on the PLT is 167. Only a paper based test administration is available. Please consult the Educational Testing Service website ([www.ets.org](http://www.ets.org)) for specific test administration information.

This is the first step on your journey to becoming a special influence on the personal growth and educational success of your future students. Please remember that your continued strong performance at the College and in your major courses is important. In order to maintain your program status, the Feinstein School of Education and Human Development requires a cumulative grade point average (GPA) of 2.50 as well as successful performance in your teacher education program. Please consult with your advisor, Karen Berard-Reed, to plan your course of study and to identify deadlines for portfolio assessments and standardized tests.

Welcome to the process of becoming a teacher.

Sincerely,

Karen S. Castagno, Ph.D.  
Associate Dean for Teacher Education

# Career Commitment Essay

Health and Physical Education Program

035 3966

March 22, 2007

NOTE: Each student's essay is read by more than one scorer. Each scorer assigns a score for the content, expression/voice, organization and conventions of the essay. The scorer also assigns an overall, holistic score for the essay. The overall score is not an arithmetic average of the other four scores. Rather, it is based on an overall impression of the quality of the essay.

The scores in the attached table represent the averages of the scores assigned by essay scorers for your essay. The OVERALL SCORE determines whether your Career Commitment Essay passes or needs to be revised and resubmitted.

**STUDENT = 35**

Descriptive Statistics(a)

	N.	Mean
CONTENT	1	2.5000
EXPRESSION	1	2.5000
ORGANIZATION	1	2.5000
CONVENTIONS	1	2.0000
OVERALL	1	3.0000
Valid N (listwise)	1	

a. STUDENT = 35

Since a very young age, I have always wanted to pursue a career in education. Each passing year I would want to be a different type of teacher depending on the grade I was in and the types of teachers I was exposed to. After graduating high school, I considered the only option that had not even crossed my mind, physical and health education. The more I looked into the more of a fit it seemed to be. Becoming a physical and health educator allows me to teach several different ages at once and incorporate different activities often. This path seems to be the most appropriate one for my active lifestyle and desire to teach. This career will allow me to educate the youth about something that affects everyone and something that I am truly passionate about.

During my senior year in high school I had the chance to observe a physical education class at a local elementary school. This experience helped me to realize that I would be making the right decision by pursuing this career. It opened my eyes to the educational value of the class because it was not just about playing games but taught concepts such as teamwork and problem solving. I feel in this position that I would have a louder voice when communicating with the students and passing on valuable information. I would have the chance to be heard about important health topics because it is one class that the majority of children are excited about. Being so avid about the class allows the students to learn more. The class can help educate children from a young age about their health and how it can be applied in a physical setting. A major issue in our country is obesity. I am committed to making children aware of the epidemic that has plagued our country more and more each year. Not only will I educate them about obesity but I will be able to show them ways to battle against it by presenting a variety of ways to exercise and keep in shape. I believe that if a child starts a healthy lifestyle at a young age, they will have the knowledge and the drive to continue on through life that way.

I attended a high school where the mission statement was based upon becoming a lifelong

learner and I have come to realize in the educational field, it is not only the children learning but the teachers as well. As a teacher, one can learn by their own experiences or even from the children. Over the years, a teacher can learn from their mistakes so as to correct their style and methods of educating others. Another important aspect that provides for teachers becoming lifelong learners is technology. Technology is always changing and it is a necessity for the teachers to stay on top of it in order to be able to relate to the students. Also with such diverse populations in schools, so much can be learned and passed on from the students themselves. I experienced this first hand while being a teacher's aide for a summer CCD program for several years. During that time, I encountered many different types of children. Each student brought something different to the table. I learned that each student is an individual and must be treated as one while at the same time trying to keep a classroom functioning as a whole. I have seen how different ways of approaching something will appeal to everyone differently. Another experience I learned a lot from was when I spent time in an ESL kindergarten class at Gladstone School in Cranston. The students all had different backgrounds and different languages but they all shared this one classroom. It is important as an educator to respect and even learn from different cultures. It also gives the other students an opportunity to learn about people different than they are.

By spending time in the kindergarten and being able to compare the progress of the children from September to June shows that all children have the potential to learn. This is not saying that they will all comprehend the same information and understand the same concepts but they can all learn something. I feel a lot depends on the approach of the teacher and how well the students respond to the method. The difference between a good teacher and a great teacher is how well they reach out to the individual student. If the student is encouraged and delivered information in a way they can understand, it will not be so much of a chore to learn. Despite the different backgrounds,

families and financial situations, in the one classroom the students were exposed to the same information and assistance from the teacher. Each student may have walked away from that kindergarten class in June with different knowledge and understanding but each one walked away with a little bit more than they started with.

Professional collaboration is a very important aspect of becoming a teacher especially a physical education teacher. I witnessed this when I visited a local elementary school's physical education class. The teacher that I worked with for that day explained how she continuously spoke to the classroom teachers to see if any of her lessons could tie into what they were doing academically. This is crucial because you only see these children for a small amount of time per week and if the teachers work together the children can get the most out of their class period. Not only should physical education teachers talk to classroom teachers but they should communicate with other teachers in their field. By discussing different approaches and ideas, the teachers can gain knowledge of what works and what does not. Learning from other teacher's experiences is a valuable resource that is readily available and worth taking advantage of.

In order to become an effective teacher, I feel that I need to become more patient and not give up my belief that all children have the potential to learn. By working in the ESL kindergarten, I realize that teaching can get frustrating and requires a great deal of patience. The ESL teacher worked with such young children who did not speak English and had an amazing amount of patience. If a child was struggling, she tried to put it in a way that he could best understand. I am aware that not every child will grasp the concept but getting frustrated is not the answer. In one of my classes right now I am working on a behavior change project and I decided to work on becoming more patient. Along with this project and my dedication for becoming a teacher, I feel that I can change. I realize that even the best of teachers get frustrated but they do not let it show and that is a key component of the job.

III. MEASUREMENT AND INFORMAL GEOMETRY, FORMAL MATHEMATICAL REASONING	9	10	5 - 9

\* Category-level information indicates the number of test questions answered correctly for relatively small subsets of the questions. Because they are based on small numbers of questions, category scores are less reliable than the official scaled scores, which are based on the full set of questions. Furthermore, the questions in a category may vary in difficulty from one test form to another. Therefore, the category scores of individuals who have taken different forms of the test are not necessarily comparable. For these reasons, category scores should not be considered a precise reflection of a candidate's level of knowledge in that category and ETS recommends that category information not be used to inform any decisions affecting candidates without careful consideration of such inherent lack of precision.

\*\* The range of scores earned by the middle 60% of a group of examinees who took this form of test at the most recent national administration or other comparable time period. N/C means if this range was not computed because fewer than 30 examinees took this form of the test or because there were fewer than 8 questions in the category or, for a constructed-response module, fewer than 8 points to be awarded by the raters. N/A indicates that this test section was not taken and, therefore, the information is not applicable.
